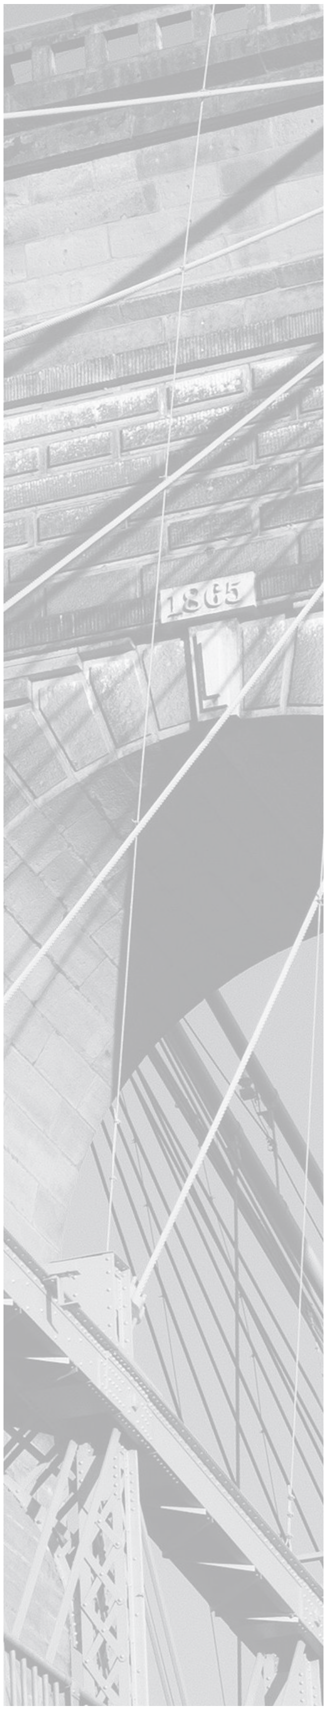
Large Cap Growth
Month-End Performance Review



There was no shortage of excitement in October. From trade wars, immigration, financial market turmoil and the customary incendiary rhetoric ahead of mid-term elections, it was easy to lose sight of the continued strength in the U.S. economy as U.S. GDP grew a solid 3.5% in the third quarter. Consumer spending added 2.7% and a buildup in inventories added 2.1%, offsetting a 1.8% trade deficit. More encouragingly, there is now evidence that the strong economy is finally benefitting lower-skilled workers. According to the Labor Department, weekly earnings for the lowest-paid Americans grew over 5% versus the median wage growth of 1.7%, with the biggest beneficiaries being those with less than a high school education, as labor shortages are most acute in blue-collar and low-paying service jobs. Wage inflation has been around 3% recently despite an unemployment rate of 3.7%, a 50-year low. However, Amazon recently made news when it increased its minimum wage to $15 per hour for its 250,000 employees. True to form, this likely hurts their competitors even more as Amazon further automates, while Walmart now faces wage pressures for its 1.5 million employees.

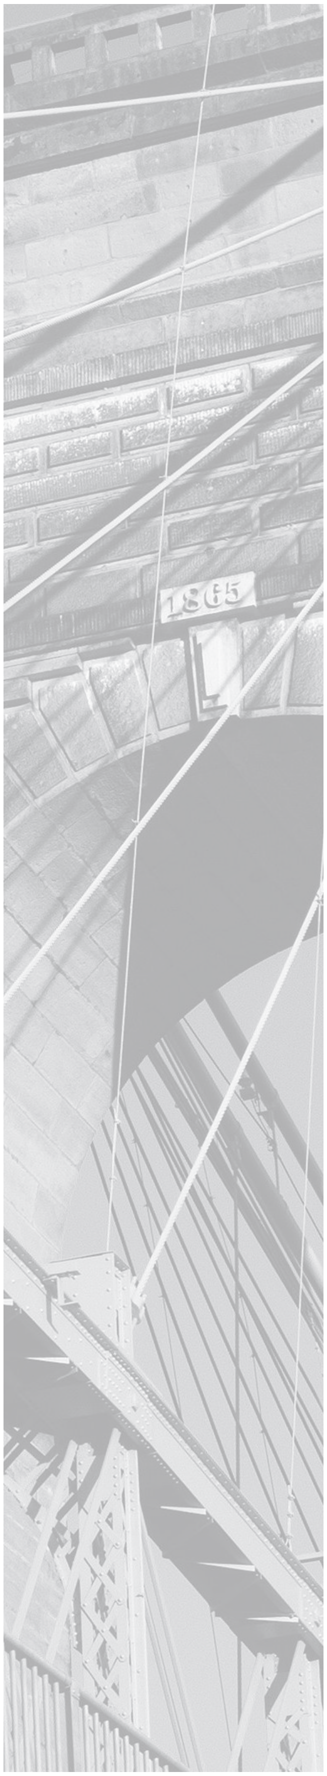
(1)Based on a representative account of the strategy discussed and shown as supplemental information to the GIPS compliant presentation. Portfolio characteristics (e.g., sector weights, valuation, growth rate) are based on a representative account that we believe is illustrative of the strategy. Characteristics and/or holdings may not be the same for all accounts invested in the strategy due to factors such as pending trades or account restrictions. Additions/ Deletions reflect security transactions completed by the date stated on this presentation, and the securities mentioned may not be held by all accounts invested in the strategy.
(2)Weights as of the end of the presentation period, which only include the equity portion of the portfolio. Cumulative total weighting may not add up to 100% due to weights being rounded to the nearest decimal place.
(3)Any securities referenced should not be considered a recommendation to purchase or sell a particular security. These securities may represent a portion or all of the companies held in a representative account in this strategy as of the date stated and are intended for informational purposes only. Non-performance based criteria have been used to select the securities listed. The past performance of these securities is no guarantee of future results. The specific securities identified and described may not represent all of the securities purchased, sold or recommended for this strategy. The reader should not assume that investments in the securities identified or discussed were or will prove to be profitable. Portfolio holdings may not be current recommendations to buy or sell any security, and may no longer be held in the representative account. To request a complete list of portfolio holdings recommendations for the past year, the calculation methodology, or a list showing the contribution of every holding to the representative account's performance for the time period stated, please contact Renaissance at compliance@reninv.com.
(4)Primary benchmark.

All references to Renaissance composite performance in this presentation are net of fees unless otherwise stated. Past performance is not indicative of future results. Performance for periods of less than a year is not annualized. All returns are shown in U.S. dollars. Please refer to the full composite presentation and GIPS disclosure on the last page for additional information including the calculation of net of fees performance.



CONTRIBUTORS TO RETURN[(1)(3)]

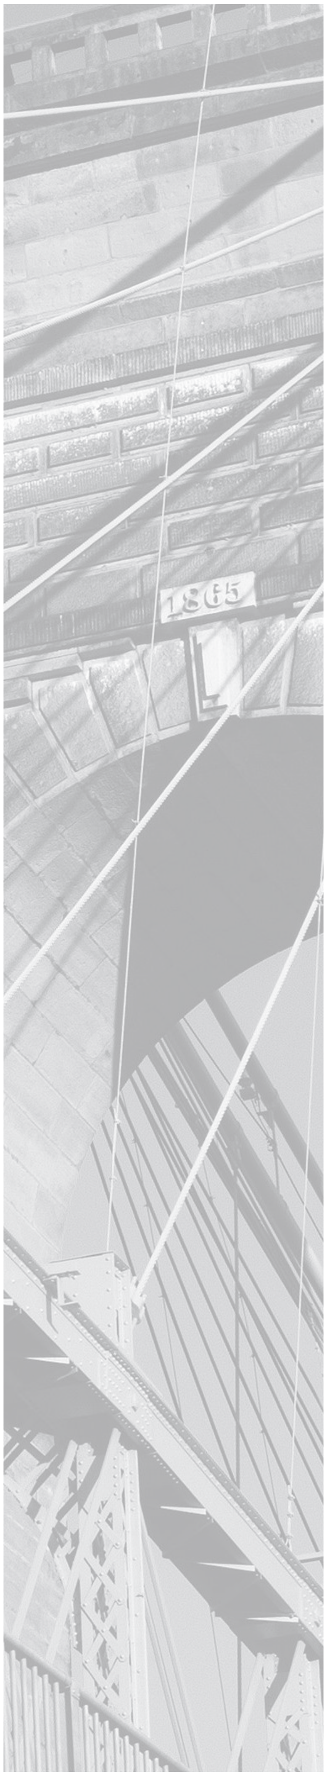
Company Name	Average Weight[(2)]	Contribution to Return	Comments
TOP FIVE CONTRIBUTORS—LARGE CAP GROWTH			
Burlington Stores	1.65%	0.23%	The stock reacted positively to the Sears bankruptcy, as Sears' inventory liquidation will provide product, and store reductions will help drive traffic to discount retailers.
Xilinx	1.93%	0.16%	The company posted solid operating results and is on track to benefit from machine learning acceleration and the upcoming 5th generation wireless technology launch.
Comcast	1.63%	0.14%	The company reported solid operating results driven by renewed focus on growing high-speed Internet subscribers. Video subscriber losses were also better than expected.
Dollar General	1.82%	0.05%	Investors gravitated toward defensive companies during the market correction, and Dollar General's focus on selling core essentials gives them better stability and visibility.
Cigna	1.98%	0.05%	The company reported solid earnings driven by better membership and medical costs metrics. In addition, Goldman Sachs added Cigna to their Conviction Buy List.
BOTTOM FIVE CONTRIBUTORS—LARGE CAP GROWTH			
Southwest Airlines	1.88%	-0.45%	The company gave preliminary 2019 guidance that showed an unexpected pickup in cost inflation. Investors are worried Southwest will not raise fares to cover these costs.
Celgene	1.79%	-0.39%	Despite reporting solid earnings, the stock sold off in sympathy with a sell-off in biotechnology stocks, as investors reverted to a risk-off strategy during the market correction.
IBM	1.38%	-0.36%	IBM missed revenue expectations, as growth in their Strategic Imperatives slowed. The acquisition of Red Hat for $34 billion also negatively impacted the stock.
Activision Blizzard	1.87%	-0.33%	The stock underperformed, as it consolidated some of its September gains following the successful launch of *"Call of Duty: Black Ops 4"*.
Lockheed Martin	1.87%	-0.29%	Lockheed underperformed on a potential slowdown in defense spending and on fears that the murder of a prominent journalist puts the company's Saudi Arabian sales in jeopardy.

Source: Renaissance Research, FactSet

On the downside, interest rates accelerated upwards due to solid economic data with the 10-year Treasury yield now approaching 3.25%. The rise in yields has resulted in 10-year Treasuries underperforming stocks this year, as the prices of bonds move inversely to rising yields. The rise in yields also affects highly leveraged and unprofitable companies, who depend on low rates to finance operations. In October, Sears Holdings filed for bankruptcy protection, which should not come as a surprise given that Sears is highly levered and has been unprofitable for almost seven years. What does matter is that Sears is symptomatic of the large number of zombie companies that have survived by borrowing at artificially low interest rates. That game changes with rising interest rates, as companies actually have to earn a return on capital to survive.

The S&P 500 declined 6.84% in October, marking the biggest monthly decline in seven years. This correction occurred despite a solid earnings season where 78% of the companies in the S&P 500

[(1)] Based on a representative account of the strategy discussed and shown as supplemental information to the GIPS compliant presentation. Portfolio characteristics (e.g., sector weights, valuation, growth rate) are based on a representative account that we believe is illustrative of the strategy. Characteristics and/or holdings may not be the same for all accounts invested in the strategy due to factors such as pending trades or account restrictions.
[(2)] Average weights over the presentation period, which only include the equity portion of the portfolio.
[(3)] The securities listed should not be considered a recommendation to purchase or sell a particular security. These securities represent the top five and bottom five contributors by weight to the performance of a representative account in this strategy as of the date stated and are intended for informational purposes only. The past performance of these securities is no guarantee of future results. The specific securities identified and described may not represent all of the securities purchased, sold or recommended for this strategy. The reader should not assume that investments in the securities identified or discussed were or will prove to be profitable. Portfolio holdings may not be current recommendations to buy or sell a security and may no longer be held in the representative account. To request a complete list of portfolio holdings recommendations for the past year, the calculation methodology, or a list showing the contribution of every holding to the representative account's performance for the time period stated, please contact Renaissance at compliance@reninv.com.



that have reported thus far have reported stronger-than-expected earnings (*Source: Factset*). While rising bond yields following the September Fed rate hike initially drove the market sell-off, traditionally defensive, low beta sectors (e.g., Utilities, Real Estate and Consumer Staples) have outperformed. This is indicative of a defensive, risk-off move and suggests that rising interest rates were the likely trigger. Furthermore, the FANG stocks, which have driven the stock market for the better part of two years, have uncharacteristically started to show chinks in the armor over the last two quarters. While Netflix (NFLX) beat investor expectations following last quarter's disappointment, **Facebook** (FB) continues to show decelerating user growth and Amazon (AMZN) missed growth expectations for the second straight quarter with nearly every business segment decelerating. **Alphabet** (GOOGL) also reported revenues that missed expectations as ad sales growth (the majority of revenues) slowed.

During October, the Russell 1000 Growth declined 8.9% with the underperformance driven by the Technology sector and a handful of mega-cap Internet stocks. We outperformed the Russell 1000 Growth benchmark predominately because of stock selection, given our focus on owning growth companies at reasonable valuations. We made several changes to the portfolio during the month, as we initiated new positions in **Burlington Stores** (BURL) and **Cognizant Technology** (CTSH). Burlington Stores operates a nationwide chain of off-price retail stores. We believe the company can drive industry-leading earnings growth through new store openings and margin expansion with new product categories. Cognizant is a direct beneficiary of the tectonic move to cloud computing and the secular shift to IT offshoring. We expect Cognizant to accelerate revenue growth as companies increase their reliance on IT specialists such as Cognizant to manage the evolution of their IT infrastructure. Conversely, we sold our positions in **Masco** (MAS) and **Charles Schwab** (SCHW) primarily because of a deterioration in fundamental factors.

DISCLOSURES

The opinions stated in this presentation are those of the authors as of the date listed on this presentation and are subject to change at any time due to changes in market or economic conditions.

STOCK REFERENCES

If securities are referenced, they should not be considered a recommendation to purchase or sell a particular security. These securities may represent a portion or all of the companies held in a representative account in this strategy as of the date stated and are intended for informational purposes only. PERFORMANCE

If Renaissance or benchmark performance is shown, it represents historically achieved results, and is no guarantee of future performance. All performance is shown in U.S. dollars unless otherwise stated. Future investments may be made under materially different economic conditions, in different securities and using different investment strategies and these differences may have a significant effect on the results portrayed. Each of these material market or economic conditions may or may not be repeated. Therefore, there may be sharp differences between the benchmark or Renaissance performance shown and the actual performance results achieved by any particular client. Benchmark results are shown for comparison purposes only. The benchmark presented represents unmanaged portfolios whose characteristics differ from the composite portfolios; however, they tend to represent the investment environment existing during the time periods shown. The benchmark cannot be invested in directly. The returns of the benchmark do not include any transaction costs, management fees or other costs. The holdings of the client portfolios in our composites may differ significantly from the securities that comprise the benchmark shown. The benchmark has been selected to represent what Renaissance believes is an appropriate benchmark with which to compare the composite performance.

The value of an investment may fall as well as rise. Please note that different types of investments involve varying degrees of risk and there can be no assurance that any specific investment will either be suitable or profitable for a client or prospective client's investment portfolio. Investor principal is not guaranteed and investors may not receive the full amount of their investment at the time of sale if asset values have fallen. No assurance can be given that an investor will not lose invested capital. Consultants supplied with these performance results are advised to use this data in accordance with SEC guidelines. The actual performance achieved by a client portfolio

REFERENCED INDICES

(Indices are unmanaged and are not available for direct investment.)

S&P 500 Index—The S&P 500 Stock Index Is a market capitalization weighted index and consists of 500 stocks chosen for market size, liquidity and industry group representation.

Russell 1000 Growth Index—The Russell 1000® Growth Index is a market capitalization weighted index that measures the performance of those Russell 1000® companies with higher price-to-book ratios and higher forecasted growth values.

GICS SECTOR INFORMATION

The S&P Dow Jones and MSCI Indices have updated their Global Industry Classification Standard (GICS) sector scheme. Under the changes, certain companies from Consumer Discretionary and Information Technology sectors were combined with the existing Telecommunication Services companies to form the new Communication Services sector. For Renaissance reporting purposes, all strategies reflect the new sector classifications. The historical sector weights were not retroactively adjusted to reflect the new scheme.

MSCI and S&P do not make any express or implied warranties or representations and shall have no liability whatsoever with respect to any GICS data contained herein.

	FINAL 12/31/2017								

* For period July 1, 1991 through December 31, 1991.
** Not meaningful figure due to five or fewer accounts invested for the entire year.
***Firm Assets do not include UMA program assets for GIPS purposes.
As of 12/31/2017, Renaissance managed an additional $3,281.7 million in UMA programs, totaling $5,484.1 in assets under management and shown as supplemental information to the GIPS compliant presentation.

Renaissance Investment Management (RIM) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Renaissance has been independently verified for the periods January 1, 2006 through June 30, 2017.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The Large Cap Growth Institutional Composite has been examined for the periods January 1, 2006 through June 30, 2017. The verification and performance examination reports are available upon request.

Firm Definition: The Renaissance Group LLC, which does business as Renaissance Investment Management (RIM), is a registered investment advisor established in 1978, with an office in Covington, KY. RIM is an affiliate of Affiliated Managers Group based in West Palm Beach, FL. RIM manages equity, tactical, balanced and fixed income assets for a variety of clients including high net worth, institutional and sub-advisory relationships. A complete list and description of the Firm's composites is available upon request.

Composite Composition: The Large Cap Growth Institutional Composite portfolios consist of approximately 50-60 mainly mid- and large- cap domestic equities, which focus on companies demonstrating financial strength, attractive growth potential, rising earnings expectations and attractive valuation. RIM created the Large Cap Growth Institutional Composite as of July 1, 2004 and it includes all fee paying, fully discretionary, non-tax managed, non-wrap Large Cap Growth accounts. RIM does not have non-fee paying portfolios. Returns are net of any performance-based fee arrangements where applicable. RIM will add new fully discretionary portfolios to the composite at the first full month under management. RIM will exclude terminated portfolios from the composite after the last full month they were under management. Composite dispersion is measured using an asset-weighted standard deviation of returns of the portfolios.

Calculation of Performance Returns: Performance is calculated using total returns. Monthly composite performance is asset-weighted using beginning-of-period values. Rates of return are time-weighted with geometric linking of monthly returns. Valuations and returns are computed and stated in U.S. dollars. Account performance is based on total assets in the account, including cash and cash equivalents. Performance is actual performance.

RIM has chosen to present performance both gross- and net-of-fees. The gross-of-fee performance returns are presented before deduction of management and custodial fees but after the deduction of all trading expenses. Net performance is reported after the deduction of all trading costs and actual RIM management fees. These gross- and net-of-fee investment results for the Renaissance Large Cap Growth Institutional Composite include reinvestment of dividends and other earnings. Clients' returns will be reduced by the advisory fee and any other expenses that may be incurred in the management of the client's investment advisory account. For example, if the gross annualized return of an account over a five-year period were 5.0%, deducting one twelfth of an annual advisory fee of 90 basis points each month on the ending monthly account balance would produce a cumulative net return of 22.7%. The cumulative gross return at 5.0% per annum over a five-year period would be 28.3%. A $1 million starting portfolio would thus have an ending net market value of $1,227,096, $56,262 less than the gross return ending value of $1,283,359. There is no minimum asset size for inclusion in the composite. RIM uses trade date accounting and income is accrued. Actual performance may differ from composite returns, depending on the size of the account, brokerage commissions, investment guidelines and/or restrictions, inception date and other factors. After-tax results will vary from the returns presented herein for those accounts that are subject to taxation. Policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Standard Deviation: The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. According to the GIPS Standards, this is not required for periods prior to 2011.

Investment Management Fees: RIM's fees are based on account size. The standard RIM fee schedule for the Large Cap Growth Strategy for direct-managed accounts is as follows: First $5 million - .75%, Next $5 million - .70%, Next $5 million - .65%, Next $5 million - .60%, Amounts over $20 million - .55%. Investment advisory fees are described in Part 2A of RIM's Form ADV.

Benchmark: The Russell 1000 Growth Index is composed of the 1,000 largest U.S. companies based on total market capitalization with higher price-to-book ratios and higher forecasted growth values. The Russell index names are registered trademarks of FTSE Russell. RIM compares its composite returns to a variety of market indices such as the Russell 1000 Growth. This index is shown for comparison purposes only. We are not trying to explicitly manage to this benchmark. This index represents unmanaged portfolios whose characteristics differ from the composite portfolios; however, they tend to represent the investment environment existing during the time periods shown. The index cannot be invested in directly. The returns of the index do not include any transaction costs, management fees or other costs. The holdings of the client portfolios in our composites may differ significantly from the securities that comprise the index shown. The index has been selected to represent what RIM believes is an appropriate benchmark with which to compare the composite performance.

Other: Performance data quoted in any Renaissance presentation represents historically achieved results, and is no guarantee of future performance. Future investments may be made under materially different economic conditions, in different securities and using different investment strategies and these differences may have a significant effect on the results portrayed. Each of these material market or economic conditions may or may not be repeated. Therefore, there may be sharp differences between the performance shown and the actual performance results achieved by any particular client. The value of an investment may fall as well as rise. Please note that different types of investments involve varying degrees of risk and there can be no assurance that any specific investment will either be suitable or profitable for a client or prospective client's investment portfolio. Investor principal is not guaranteed and investors may not receive the full amount of their investment at the time of sale if asset values have fallen. No assurance can be given that an investor will not lose invested capital. Consultants supplied with these performance results are advised to use this data in accordance with SEC guidelines. The actual performance achieved by a client portfolio may be affected by a variety of factors, including the initial balance of the account, the timing and amount of any additions to or withdrawals from the portfolio, changes made to the account to reflect the specific investment needs or preferences of the client, duration and timing of participation as a RIM client, and a client portfolio's risk tolerance, investment objectives, and investment time horizon. All investments carry a certain degree of risk, including the loss of principal and are not guaranteed by the U.S. government.

Risks of Large Cap Growth Strategy: Large Cap Growth Institutional Composite returns may show a high level of variability. In addition to market risk, the majority of any additional risk in these portfolios is related to specific stock selection, and RIM will have significant exposure to individual securities.
