Renaissance Investment Management

Quarter Ending 12/31/2022

International Equity ADR Quarter-End Review—4Q2022

After three negative quarters in a row, international markets turned positive for the final quarter of 2022, capping a tumultuous year for both equity and fixed income investors. Many equity indices across the globe saw their best quarterly results since the end of 2020, with developed markets faring better than emerging markets and value-oriented stocks outpacing growth-oriented stocks for the quarter and the year. Market sentiment improved during the quarter after two major headwinds—China and inflation—turned into tailwinds. While many investors were looking for a so-called Fed pivot away from rate increases, the market instead welcomed a China COVID pivot. After almost three years of harsh pandemic-related controls, the Chinese government finally ended most restrictions and began opening their economy. As the coronavirus winds its way through the Chinese population, economic activity will be stunted at first, but global growth could see a boost from China later in 2023, with China GDP growth expected to rebound to 4.8% in 2023 versus 3.1% in 2022, according to estimates compiled by FactSet.

PERFORMANCE

	Quater Ending 12/31/2022	Year Ending 12/31/2022
Institutional Composite (gross)	15.54%	-17.40%

Sources: Renaissance Research, FactSet

Record high inflation rates, which have been the bane of many central bankers, have also started to come down in a number of countries. This trend is expected to continue in 2023 as supply chain bottlenecks ease and commodity prices such as crude oil remain well off their 2022 highs. Meanwhile, higher interest rates have started to dampen economic spending in areas such as housing and auto sales, putting further downward pressure on prices. Based on current price trends, global inflation looks to finish 2023 much lower than current levels. However, as signaled by central bankers, interest rates will need to remain high to ensure that inflation stays low. Most central banks are expected to raise rates higher in 2023, putting pressure on economic growth, with economists expecting a recession in some countries and regions including Europe.

Dovetailing with 2023 economic recession fears has been a deterioration in manufacturing Purchasing Managers' Indices (PMIs), with many country indices at levels below 50, indicating a contraction in economic activity. PMI indices declined for most of 2022, with the United States peaking in April 2022 and other countries' PMIs sliding since mid-2022. While the PMI decline coincided with equity market weakness, there is a bit of optimism that economic growth and company earnings may see a rebound, albeit slight, starting in the latter half of 2023. Estimated earnings for international companies have increased since October, suggesting that analysts are becoming more optimistic that the earnings nadir has been reached.

Our strategy performance for the quarter was positive on an absolute basis. Sector returns were on the plus side across all eleven economic sectors in our benchmark. This was in stark

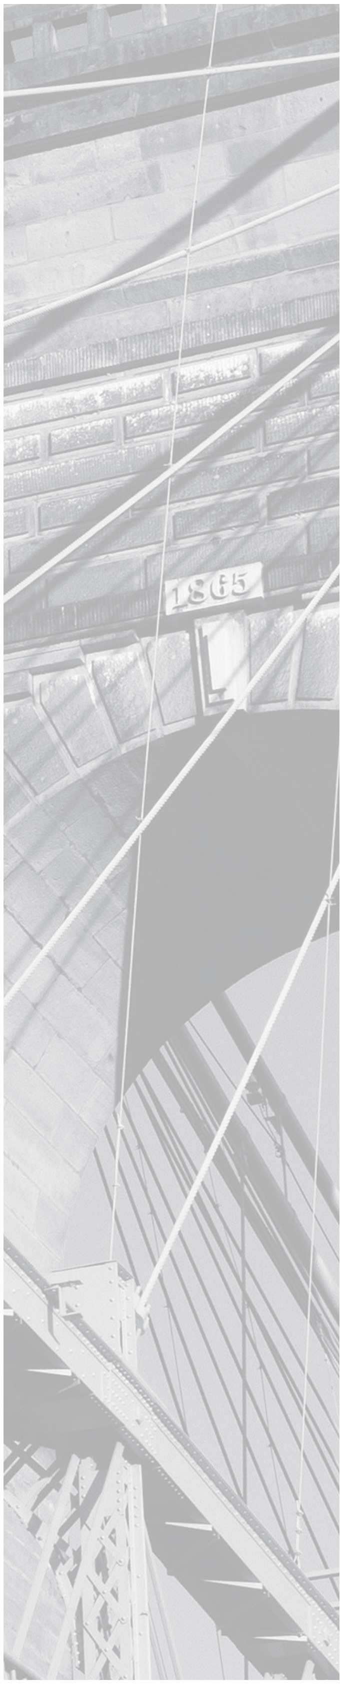
contrast to benchmark year-to-date returns through the end of September when only the Energy sector saw gains. Within our strategy, the broad-based rally was led by contributions from the Financials, Industrials, and Consumer Discretionary sectors. Least additive to returns were our holdings in the Utilities, Energy, and Communication Services sectors. Regionally, Western Europe was our best performer and largest allocation within our portfolio. Our holdings in the United Kingdom and France were the most additive, while Finland and Sweden contributed the least to our performance. Our Middle East & Africa positions detracted from performance, led lower by our allocation to Israel. As seen with our benchmark, our developed market holdings performed better than our emerging market stocks. European stocks helped boost developed market returns, while South Korea and Mexico contributed in emerging markets.

From a positioning standpoint, we maintain a relative overweight to the Information Technology sector, which was the weakest contributing sector for the year. We believe the long-term prospects for tech stocks have not changed, and we are overweight semiconductor companies. While smartphones and personal computers remain the largest segment for chip sales, the highest growth segment is expected to be automotive related. In 2022, we saw a decline in the demand for chip sales for smartphones and PCs, but we believe that our positioning in automotive-related chip stocks should bode well for the portfolio given the rapid increase in automotive chips required for electric cars as well as for ADAS (Advanced Driver Assistance Systems) features.

Looking at individual positions, our best contributing stocks for the quarter were **Capri Holdings** (United Kingdom), **Arch Capital** (Bermuda) and **International Game Technology** (United Kingdom). Global fashion group Capri posted better-than-expected 2Q earnings despite weakness in China. The Versace, Jimmy Choo, and Michael Kors segments all beat top-line revenue estimates, and the company announced a new $1 billion stock buyback. Insurer Arch Capital reported stronger-than-expected third quarter earnings even amid higher catastrophe losses associated with storms in the United States and Europe. Its mortgage insurance side of the business also continues to do well and accounts for much of the firm's bottom line. Investors grew more encouraged about the 2023 prospects for global lottery and gaming company International Game Technology, which recently signed contracts with the states of Georgia and Texas as well as with Ontario, Canada. In addition, demand for more advanced gaming machines has helped to push gross margins higher in its Gaming unit.

Vipshop (China), **Vermilion Energy** (Canada), and **WH Group** (Hong Kong) were our weakest performing stocks for the quarter. We exited Chinese online retailer Vipshop early in the quarter before China relaxed its COVID protocols, as continued lockdowns in China weighed on consumer sentiment and spending. Oil and gas producer Vermilion Energy was weak during the quarter as European natural gas prices declined and government officials drew closer to imposing a windfall tax on energy companies with operations in Europe. Pork and packaged meat producer WH Group reported mixed 3Q22 results, with packaged meat sales higher in the U.S. but lower in China. Positively, the outlook for WH Group should improve going forward with the reopening of China leading to higher sales.

While 2022 was a year for the record books given the decline in both equity and fixed income markets, history does tell us that international markets have rebounded in the past after suffering large declines. In fact, after the last three double-digit international equity market declines in 2008, 2011, and 2018, the markets rebounded by double-digits the following year. Relative valuations of non-U.S. stocks also look attractive going into 2023. Based on trailing price-to-earnings ratios, international markets trade at a 31% discount to the S&P 500, compared to an average 25% discount over the last 10 years. Another positive for international markets is the possible weakening of the U.S. dollar, which may decline as the U.S. Fed looks to scale back its pace of interest rate increases. Geopolitical tensions between the United States



and China remain high, but progress has been made in some areas of disagreement such as company audits.

We believe that our Growth At a Reasonable Price (GARP) investment philosophy lends itself to favorable returns as markets seek companies that exhibit growth in a slowing economy but also trade at attractive valuations.

DISCLOSURES

The opinions stated in this presentation are those of Renaissance as of December 31, 2022 and are subject to change at any time due to changes in market or economic conditions.

GICS® SECTOR INFORMATION

Sector Listing according to MSCI and S&P Dow Jones data: MSCI and S&P Dow Jones do not make any express or implied warranties or representations and shall have no liability whatsoever with respect to any GICS data contained herein.

PERFORMANCE

If Renaissance or benchmark performance is shown, it represents historically achieved results, and is no guarantee of future performance. All performance is shown in U.S. dollars unless otherwise stated. Future investments may be made under materially different economic conditions, in different securities and using different investment strategies and these differences may have a significant effect on the results portrayed. Each of these material market or economic conditions may or may not be repeated. Therefore, there may be sharp differences between the benchmark or Renaissance performance shown and the actual performance results achieved by any particular client. Benchmark results are shown for comparison purposes only. The benchmark presented represents unmanaged portfolios whose characteristics differ from the composite portfolios; however, they tend to represent the investment environment existing during the time periods shown. The benchmark cannot be invested in directly. The returns of the benchmark do not include any transaction costs, management fees or other costs. The holdings of the client portfolios in our composites may differ significantly from the securities that comprise the benchmark shown. The benchmark has been selected to represent what Renaissance believes is an appropriate benchmark with which to compare the composite performance.

The value of an investment may fall as well as rise. Please note that different types of investments involve varying degrees of risk and there can be no assurance that any specific investment will either be appropriate or profitable for a client or prospective client's investment portfolio. Investor principal is not guaranteed and investors may not receive the full amount of their investment at the time of sale if asset values have fallen. No assurance can be given that an investor will not lose invested capital. Consultants supplied with these performance results are advised to use this data in accordance with SEC guidelines. The actual performance achieved by a client portfolio may be affected by a variety of factors, including the initial balance of the account, the timing and amount of any additions to or withdrawals from the portfolio, changes made to the account to reflect the specific investment needs or preferences of the client, durations and timing of participation as a RIM client, and a client portfolio's risk tolerance, investment objectives, and investment time horizon. All investments carry a certain degree of risk, including the loss of principal and are not guaranteed by the U.S. government.

REFERENCED ETFs

iShares MSCI ACWI ex US ETF—The iShares MSCI ACWI ex U.S. ETF seeks to track the investment results of an index composed of large- and mid-capitalization non-U.S. equities.

iShares MSCI Emerging Markets ETF—The iShares MSCI Emerging Markets ETF seeks to track the investment results of an index composed of large- and mid-capitalization emerging market equities.

REFERENCED INDEX

Indices other than ETFs are unmanaged and are not available for direct investment.

S&P/BNY Mellon Classic ADR Index—The S&P/BNY Mellon Classic ADR Index is a free float adjusted, capitalization-weighted U.S. dollar total return index that includes all U.S. Exchange-listed or OTC traded Depositary Receipts with the exception of Grey Market Securities, New York Shares and Global Registered Shares.

** Renaissance Total Firm assets under management include Non-Discretionary Assets (UMA Programs), for which Renaissance does not have trading authority. The Non-discretionary management of UMA Sponsor accounts consists of Renaissance providing the UMA Sponsor with changes to each participating Renaissance model portfolio on an ongoing basis.

Renaissance Investment Management (RIM) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. RIM has been independently verified for the periods from January 1, 2006 through June 30, 2022.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite maintenance, as well as calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The International Equity ADR Institutional Composite has had a performance examination for the periods January 1, 2006 through June 30, 2022. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Firm Definition: The Renaissance Group LLC, which does business as Renaissance Investment Management (RIM), is a registered investment advisor established in 1978, with an office in Covington, KY. RIM is an affiliate of Affiliated Managers Group based in West Palm Beach, FL. RIM manages equity, tactical, balanced, and fixed income assets for a variety of clients including high net worth, institutional and sub-advisory relationships. A list of all composite descriptions is available upon request.

Composite Composition: The International Equity ADR Institutional Composite (inception date: 7/1/1994) portfolios consist of approximately 50-60 equities exhibiting a combination of strong earnings growth, reasonable valuation, rising earnings expectations and profitability. The initial universe begins with all American Depositary Receipts (ADRs) and U.S. listed foreign corporations. The International Equity ADR Institutional Composite, created on April 1, 2005, includes all fee-paying, non-wrap International Equity ADR accounts. As of January 1, 2021, the composite was redefined to also include tax managed accounts which were previously excluded. The composite does not include non-fee-paying managed accounts. Returns are net of any performance-based fee arrangements where applicable. RIM will add new fully discretionary portfolios to the composite at the first full month under management. RIM will exclude terminated portfolios from the composite after the last full month they were under management. Composite dispersion is measured using an asset-weighted standard deviation of gross returns of the portfolios. On July 1, 2017, the International Equity Institutional Composite was renamed the International Equity ADR Institutional Composite.

Calculation of Performance Returns: Performance is calculated using total returns. Monthly composite performance is asset-weighted using beginning-of-period values. Rates of return are time-weighted with geometric linking of monthly returns. Valuations and returns are computed and stated in U.S. dollars. Account performance is based on total assets in the account, including cash and cash equivalents. Performance is actual performance.

RIM has chosen to present performance both gross- and net-of-fees. The gross-of-fee performance returns are presented before deduction of management and custodial fees but after the deduction of all trading expenses. Net performance is reported after the deduction of all trading costs and actual RIM management fees. These gross- and net-of-fee investment results for the Renaissance International Equity ADR Institutional Composite include reinvestment of dividends and other earnings. Clients' returns will be reduced by the advisory fee and any other expenses that may be incurred in the management of the client's investment advisory account. For example, if the gross annualized return of an account over a five-year period were 5.0%, deducting one twelfth of an annual advisory fee of 90 basis points each month on the ending monthly account balance would produce a cumulative net return of 22.7%. The cumulative gross return at 5.0% per annum over a five-year period would be 28.3%. A $1 million starting portfolio would thus have an ending net market value of $1,227,096, $56,262 less than the gross return ending value of $1,283,359. There is no minimum asset size for inclusion in the composite. RIM uses trade date accounting and income is accrued. Actual performance may differ from composite returns, depending on the size of the account, brokerage commissions, investment guidelines and/or restrictions, inception date and other factors. After-tax results will vary from the returns presented herein for those accounts that are subject to taxation. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

Standard Deviation: The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. According to the GIPS Standards, this is not required for periods prior to 2011.

Investment Management Fees: RIM's fees are based on account size. The standard RIM fee schedule for the International Equity ADR Strategy for direct-managed accounts is as follows: All amounts – 1.00%. Investment advisory fees are described in Part 2A of RIM's Form ADV.

Benchmark: RIM compares its composite returns to the S&P/BNY Mellon Classic ADR Index. The S&P/BNY Mellon Classic ADR Index (net of foreign withholding taxes) seeks to track all American depositary receipts trading on the NYSE, NYSE American, NASDAQ, and over-the-counter (OTC) in the United States, subject to size and liquidity requirements. This index is shown for comparison purposes only. We are not trying to explicitly manage to this benchmark. This index represents unmanaged portfolios whose characteristics differ from the composite portfolios; however, it tends to represent the investment environment existing during the time periods shown. This index cannot be invested in directly. The returns of this index do not include any transaction costs, management fees or other costs. The holdings of the client portfolios in our composites may differ significantly from the securities that comprise the index shown. Renaissance changed the benchmark (from the MSCI All World Country exUSA Index) retroactively as of 6/30/2020. The index has been selected to represent what Renaissance believes to be an appropriate benchmark with which to compare composite performance.

The iShares MSCI ACWI ex US ETF is shown as supplemental data and used for sector and country attribution. The iShares MSCI ACWI ex US ETF seeks to track the investment results of an index composed of large- and mid-capitalization non-U.S. equities. iShares ETF names are registered trademarks of Blackrock, Inc. Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce performance. Beginning August 10, 2020, market price returns for BlackRock and iShares ETFs are calculated using the closing price and account for distributions from the fund. Prior to August 10, 2020, market price returns for BlackRock and iShares ETFs were calculated using the midpoint price and accounted for distributions from the fund. The midpoint is the average of the bid/ask prices at 4:00 PM ET (when NAV is normally determined for most ETFs). The ETF performance has not been examined.

Other: Performance data quoted in any Renaissance presentation represents historically achieved results and is no guarantee of future performance. Future investments may be made under materially different economic conditions, in different securities and using different investment strategies and these differences may have a significant effect on the results portrayed. Each of these material market or economic conditions may or may not be repeated. Therefore, there may be sharp differences between the performance shown and the actual performance results achieved by any particular client. The value of an investment may fall as well as rise. Please note that different types of investments involve varying degrees of risk and there can be no assurance that any specific investment will either be appropriate or profitable for a client or prospective client's investment portfolio. Investor principal is not guaranteed, and investors may not receive the full amount of their investment at the time of sale if asset values have fallen. No assurance can be given that an investor will not lose invested capital. Consultants supplied with these performance results are advised to use this data in accordance with SEC guidelines. The actual performance achieved by a client portfolio may be affected by a variety of factors, including the initial balance of the account, the timing and amount of any additions to or withdrawals from the portfolio, changes made to the account to reflect the specific investment needs or preferences of the client, duration, and timing of participation as a RIM client, and a client portfolio's risk tolerance, investment objectives, and investment time horizon. All investments carry a certain degree of risk, including the loss of principal and are not guaranteed by the U.S. government.

Risks of International Equity ADR Strategy: International Equity ADR Institutional Composite returns may show a high level of variability. In addition to market risk, the majority of any additional risk in these portfolios is related to specific stock selection, and RIM will have significant exposure to individual securities.
